(三)、閱讀

Christmas is an annual Christian holiday and is celebrated on December 25th around the world. Millions of people take this family-centered holiday very seriously and pull out all the stops to ensure that every Christmas meal is better than the last. The main focus of any Christmas dinner is, of course, the turkey.

Most turkeys these days can be bought frozen from a supermarket. These turkeys need to be completely thawed before they can be cooked. Turkeys need to be taken out of the freezer and thawed for 1 day for every 2 kg of turkey. So a 6 kg

turkey needs 3 days to be thawed before it can be cooked! A proper Christmas turkey would need to be roasted from 3 hours to 7 hours in the oven. Turkeys also need constant attention. Every 30 minutes, they need to be basted. That means taking the fat, juices and drippings from the turkey pan and pouring them over the turkey to keep it moist. It seems like a lot of hard work, but a well-roasted turkey is totally worth it!

There are many species of insects on our amazing planet. Some are beautiful and harmless; while others are quite dangerous and can hurt us and even kill us. Usually, insects and people avoid each other without too many problems. But sometimes, bad things can happen when there is a home invasion.

A woman in Taiwan disturbed the home of some bees while cleaning during the recent Tomb Sweeping holiday.

As the dirt and dust flew up into the air, four tiny little bees flew into her left eye. The woman's eye got red and began to swell, but she did not think too much about it. She had no idea that she now had bees living in her eye. When she went to see an eye doctor a few days later, the four bees were found hiding under the eyelid. They didn't die because they drank her tears. The bees were carefully taken out from the woman's eye, and she was given some medicine for her eye. When doing anything outside, always “bee” careful not to disturb any insects!
